

PRODUCT SPEC SHEET

A USB drive running WipeOS Lite - a standalone, offline erasure tool that wipes drives without requiring the WipeOS appliance.

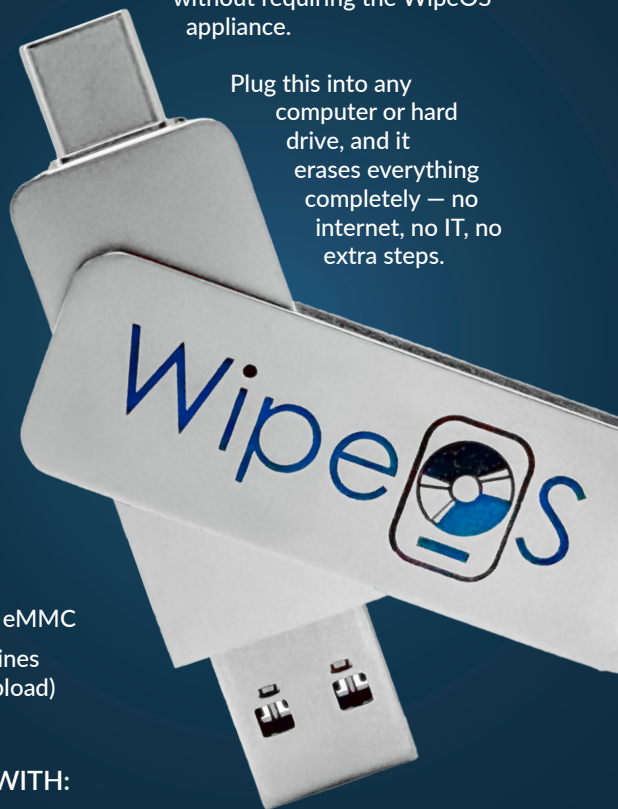

Plug this into any computer or hard drive, and it erases everything completely — no internet, no IT, no extra steps.

WORKS WITH:

- ✓ Internal drives:
SATA, SAS, NVMe, eMMC
- ✓ Windows 11 machines
(for log retrieval/upload)

DOES NOT WORK WITH:

- ✗ Servers - no RAID-breaking capability
(Raidbreak), so RAID arrays can't be broken down for wiping
- ✗ Apple T2-equipped Macs — no driver support for the T2 chip

CAPABILITIES

Erases Internal Drives	SATA, SAS, NVMe, eMMC
Runs Standalone	No WipeOS appliance required
Wipe Scope	Full drives only - cannot target individual files or folders
Drive Selection	User selects which connected drive(s) to wipe
Wipe Method Selection	User chooses from multiple wipe methods per drive
Job Tracking Fields	Account Number, Job Number, and Notes - entered as free text at runtime
Interface	Navigable by keyboard (Tab key) or mouse - no login/password required
Clock Check	If system time is wrong, device prompts the user to set it manually

HOW IT WORKS

Before First Use

User disables Secure Boot in the target machine's BIOS.

Plug In

User inserts the USB into the target device.
No appliance, no network connection, no login required.

Select Drive(s)

User picks which internal drive(s) to wipe from the on-screen list.

Select Wipe Method

User chooses the erasure method for each selected drive.

Enter Job Info

User typed in Account Number, Job Number, and Notes.

Time Check

If the system clock is off, the device prompts the user to correct it before proceeding.

Wipe Runs

Fully offline — no internet or network connection required at this stage.

Get Results

Logs are saved to the USB automatically. If the USB has Ethernet/internet access, logs can also upload directly to the portal.

REPORTING & PORTAL INTEGRATION

Log Storage:

Logs are saved locally to the USB drive.

Direct Upload:

If the USB is connected to the internet (Ethernet), logs upload straight to the portal.

Manual Retrieval Path:

Alternatively, plug the USB into a Windows 11 PC to view the logs and upload them to the portal from there.

Reporting Parity:

Reports generated from a WipeOS Lite wipe look and function exactly like reports from an appliance wipe — no separate report type for customers to learn.

Admin Configuration:

The bootable ISO image used on the USB is configured/managed through the portal by admins.

LICENSING & BILLING

1 WIPE = 1 CREDIT

Features:

- No appliance required
- Works offline / no internet needed to run a wipe
- No login or password needed to operate
- Same reporting and same credit system as the appliance — nothing new to learn
- Fast, portable, DIY
